LOW-FIRE (CONE 06-05 / 999°C-1046°C / 1830°F - 1915°F)

Mayco's Fundamentals® Underglazes are formulated for application to wet clay, greenware or bisque, producing vibrant colors and consistent, dependable performance. Fundamentals® will fire to a soft, matte finish when left unglazed. Applying a clear glaze will create a brilliant gloss finish to your surface. Fundamentals® Underglazes

are AP Certified Non-Toxic for human consumption when used according to manufacturer's directions and Dinnerware Safe when clear glaze is applied. Fundamentals® can be used for all over coverage or in combination with Stroke & Coat®, Foundations® or Cobblestones. We recommend testing at your preferred firing temperature prior to use.

HOW TO USE

One coat will create a translucent finish with subsequent coats adding opacity. We suggest 2-3 coats for full opacity and all over coverage. If the form you are painting has texture, dab excess color out of the texture to avoid pooling. For use on clay or greenware, apply underglaze, allow to dry, and fire to cone 04. If desired, apply clear glaze and refire to cone 06-05 (999°C-1046°C / 1830°F -1915°F).

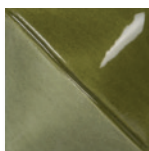

For use on bisque, apply to cone 04 bisque, allow to dry, apply clear glaze if desired, and fire to cone 06-05 (999°C-1046°C / 1830°F -1915°F). To intensify color or for use on dinnerware, apply a gloss or matte clear glaze. We recommend S2101 Crystal Clear for low-fire. We recommend testing at your preferred firing temperature prior to use. For use at higher temperatures, see the reverse of this brochure.

Firing Tip!

If cone 06 does not develop the color you want – go hotter. We recommend cone 03 - 04. Fundamentals® Underglazes can take the extra heat – push them to get the vibrancy you need and temperature the clay body can handle.

Blendable & Intermixable

Mix colors to create something new; use brushstrokes to blend colors and create shading; layer them without concern of intermixing – great for Majolica – add thin lines and details with confidence as Fundamentals® will NOT move.

Terri Kern

Matte Finish

Fundamentals® Underglazes will fire matte without addition of a clear glaze. To intensify color or for use on dinnerware, apply clear or matte clear glaze. To create depth and contrast, combine the matte finish of Fundamentals® with a glossy glaze such as Stroke & Coat®.

Apply to Wet Clay

Apply Fundamentals® Underglazes directly to wet or leatherhard clay and fire to cone 04. Even on red clay, colors retain their vibrancy. If desired, apply clear glaze and refire to cone 06-05 (999°C-1046°C / 1830°F -1915°F).

Painterly Properties

Much like using oil or watercolor, Fundamentals® Underglazes can be used to create a life-like portrait or landscape. Use rendering, shading, blending and other painting techniques to add dimension and a sense of realism to your work.

Co-Fire With Clear

Fundamentals® can be co-fired with clear glaze in a single firing. When working with clay, we recommend leaving an area unglazed such as the bottom or back for outgassing during firing. Outgassing can trap bubbles or create craters – adding a 15 minute hold will fix most surface issues.

Glaze Sgraffito

The sgraffito technique is created by applying layers of Fundamentals® and then carving through the color to produce depth and contrast in your designs. It's a striking and dramatic method to utilize Fundamentals® on bisque or clay surfaces.

Watercolor Style

For a more traditional and painterly approach, dilute underglazes with water to create a thinned watercolor-like glaze. Use these tints to layer for seamless blending.

All Over Coverage or Design Work

Fundamentals® can be used for delicate designs or all over coverage. Create variation by leaving some areas matte and others glossy with clear glaze. Visit MaycoColors.com to view our extensive project library with endless techniques to inspire you.

Burnishing

A pottery technique known as burnishing/polishing creates a smooth background ideal for spot glazing and alternative firings like horsehair or sagger. Use a soft cloth or facial tissue (without lotion) to polish the damp surface until a sheen appears. Additional burnishing will increase the smoothness and sheen.

DESIGNER LINER

Designer Liner is a clay based and heavily pigmented underglaze. Use this versatile product to create fine detail with lines, dots, and letters. The metal writer tip allows for ultimate control to draw ultra-fine or bold lines, typography and intricate illustration, or apply with a brush to create watercolor or ink wash effects. Fires matte without clear glaze.

Storage Tips for Designer Liner

Remove the white cap then gently puncture plastic tip with the metal writer tip. After placing the metal tip onto the bottle cap, push the included pin through the small ziptop bag and seal. This makes it easier to keep track of the pin and turns the bag into a flag! Keep the pin in the metal writer tip when not in use.

Lines and Dots

Try all types of line work to create depth and visual interest. Designer Liner is the tool to draw in all styles; pointillism, cross-hatching, and shading. Designer Liner is not a dimensional product. If applied too thick or heavy, Designer Liner will crack and possibly pop off.

Writing Text

Use the metal writer tip or a script liner brush to find your style with Designer Liner. Create using cursive, freehand drawing, block-lettering, or calligraphy. Designer Liner can also be used to sign the bottom of your work without Designer Liner sticking to the kiln shelf.

Brush Work

Use a brush to apply Designer Liner to simulate a watercolor or ink wash effect. Designer Liner is best when used under non-moving transparent or semi-transparent glazes. Designer Liner will fire matte when clear glaze is not applied over top.

E-Z STROKE® TRANSLUCENT UNDERGLAZES

Intense pigment and high definition are the trademark of Duncan E-Z Stroke® Translucent Underglazes. Perfect for brushwork and antiquing, helping you achieve the look of watercolor or detailed shading on greenware or bisque. For use on clay or greenware, apply 1 coat for translucent designs, allow to dry, and fire to cone 04. If desired, apply clear glaze and refire to cone 06-05 (999°C-1046° C / 1830°F -1915°F). For use on bisque, apply to cone 04 bisque, allow to dry, apply clear glaze if desired, and fire to cone 06-05 (999°C-1046° C / 1830°F -1915°F). For rich depth and shading, apply additional thin coats. Fires matte without clear glaze.

Brushwork

E-Z Strokes® can be used for delicate brushwork and are intermixable for custom colors. For shaded brushwork, load the brush with color, then tip or side load the brush with a second color and apply.

Colorful Bands

E-Z Stroke® colors are ideal for banding on color. Thin the color with water or Thin 'n Shade to a milk or thin cream consistency, and band on one coat to greenware or over a base-coat color. Be sure to center the piece on banding wheel.

Application Methods

E-Z Strokes® can be used for a wide array of techniques including sponging, splattering, stippling, and antiquing to create accents or for all over coverage with design tools. Thin the color with water or Thin 'n Shade to the consistency of thin cream prior to use.

ASSORTMENT KITS

Fundamentals® Underglazes, E-Z Stroke® and Designer Liner is available in assortment kits that include our most popular colors. Kits make a great choice for the classroom or studio, or as a sampler. Value priced packs are available in multiple sizes.

Colors shown below were fired to Cone 06 (999°C/1830°F), but also perform great when fired to higher temperatures. View the Cone 6 (1222°C/2232°F) firing results on MaycoColors.com

Thinning E-Z

Even though E-Z Strokes® are premixed to a light-cream consistency, at times it may be necessary to add water or Thin 'n Shade to reach the desired consistency – wash, milk or light cream – for the specific effect you want to achieve.
